Cut resistant.

Suspenders.

HART QUALITY

Generally speaking, we are comfortable when we are neither shivering nor sweating. Heat is the main source of discomfort. We don't lose or gain cold, we lose or gain heat. With Hartware concept we have targeted the following goal: to develop outdoor sport clothing and footwear equipment the best we can to control heat transfer and gain comfort in any level of activity. We have developed this label as our top Hart range to wear: Hartware. It is our natural Selection.

When we over-heat, we perspire, regardless of what we are wearing.

At some point, extreme heat, humidity, or heavy perspiration can overload the vapour transmission capacity of any clothing, even a cotton T-shirt. When the system is overloaded, moisture accumulates inside and discomfort often results. Osmotech technology is a fabric mix that includes very breathable outdoor plus high waterproof features. This system is less likely to overload and cause discomfort than less breathable, waterproof products.

Osmotech plus means one step beyond in the waterproofness and breathability of our HART garments. Made in PTFE, this membrane means high waterproofness (over 10000 mm) and breathability (10000 gr./m²). Either laminated to the outshell fabrics or used as a layer, Osmotech plus really improves the comfort of our functional clothing.

Windtech products are outerwear or accessories with a weather protection layer function.

They are made from air-permeable fabrics such as knit or fleece fabrics laminated to the Windtech membrane to make them windproof. Windtech fleece's high versatility provides greater comfort over a broad range of temperatures and activity levels.

EDS (Ergonomic Design System) concept has a target: to develop the most innovative and technically advanced hunting apparel with designs that improve Hart garments' performance in terms of comfort.

The human body is full of bones and muscles that show us how to develop our second skin, our clothing. Physical activity is one of the main issues in hunting.

Therefore, our hunting apparel must always follow our anatomy looking for ergonomics in all our movements.

HDI HIGH DENSITY INSULATION

HDI technology (High Density Insulation) conserves body heat and doesn't trap the moisture generated in physical activities. Its high density synthetic microfibers provide a high level of insulation without compromising the weight of the garment. These microfibers trap the warm air molecules generating a natural barrier against low temperatures in order to preserve the heat produced by body. This system maintains its insulation capacity even in humid conditions thanks to its low liquid absorption capacity. This helps the quick drying of the garment.

Cotton Diamond Line (CDL) is a light and cool tough-wearing cotton canvas fabric developed for warm-weather shooting. PU coated to ensure a water-repellent function and Teflon™ coated for strengthened fibres, the breathable cotton yarn is woven tight enough to fend off brush and insects yet light enough to remain cool. The material is usually prewashed at the factory, and then the entire cloth is re-washed to soften it.

CDL clothing is lightweight and durable, perfect for warm-weather walk-up hunts.

CE-PERSONAL PROTECTIVE EQUIPMENT (PPE Cat II) - Wildboard protective pants.

This certification gathers the composition of the garment and guarantees its confection with fabric anti-impact resistant to perforations, similar to those caused by the attack of a boar.

CE - PERSONAL PROTECTIVE EQUIPMENT (P.P.E. CAT II) - High-Visibility Safety Apparel.

All the clothing marked with this logo has been certified and registered as P.P.E. (Personal Protective Equipment) by a Notified Organisation. This certification confirms that the standards and legislation about PPE high-visibility safety apparels have been fulfilled. This standard has been certified in compliance with the PPE rules for the construction, production and maintenance of high-visibility safety apparel to improve hunters safety routinely exposed to the hazards of low daylight visibility while hunting.

This multifunctional fabric series combines Nylon and Polyester yarns coated with an innovative abrasion resistant and non-slip glue. It's one of the best protective materials for sport and outdoor garments. Its properties include excellent abrasion resistance, non-slip function, tearing resistance and cut-resistant function. Thanks to these qualities, it is a perfect thornproof defense.

Stretch fabric with elastic components made of a mixture of Nylon, Polyester and Elastane. It is used as protection in garments where we need extra reinforcement, but also freedom of movement to enter areas of dense vegetation.

Products under this label contain 4-way or 2-way stretch fabrics constructed with elastic fibers. They are performance-fit outdoor, basically designed for hunting, suitable for hiking and other outdoor activities but also very comfortable for casual wear. You can be sure that our XTRETCH DYNAMIC apparel can handle the pressure of demanding physical activities.

BioLogic®titanium belongs to a new category in scent-eliminating technologies - anti-bacterial defense. BioLogic®titanium represents a TiO₂ film layered on a fabric whose nano sized molecules (8-10nm) create a semi-permanent almost invisible coating that protects from biological contamination and assists the decomposition of all kinds of microbes.

Beyond Vision® BIG GAME photo camouflage is the ultimate disguise for hunters in a wide variety of temperate zone environments. Designed with greatest attention to detail, Beyond Vision® BIG GAME incorporates oak and birch stems, limbs and leaves, pine scapes and branches with cones and needles that provide cover in various wooded settings as well as in the open country.

Beyond Vision® TUNDRA utilizes the benefits of the innovative Beyond Vision® photo technology to create the utmost cover up for winter hunting.

It will cloak your maneuvers in secrecy in the hardwood or mixed forests, partially covered with snow bushes or rocks as well as in any snowy surroundings.

HHL Technology™ Vital Protection is a revolutionary and long-lasting insect repellent that can help you avoid nasty, itchy bites or, even worse, serious illness. Vital Protection provides also anti-bacterial functionality, preventing odours, discolouration and degradation, ensuring fresher, more hygienic and durable fabrics. Environmentally friendly, non-irritant and biodegradable.

MEN'S COLLECTION

IRATI

SP LINE

IRATI SP LINE-T

The utmost updating of the succesful Irati concept: perfect noiseless, strong and waterproof pant. Silent and resistant Toplon fabric combined with micro-Toplon fabric in high-activity areas. Comfort and strenght in technical pants.

EDS: Ergonomic Design System. 8-pocket construction: 2 waterproof zipper bias pockets, 2 side cargo pockets with waterproof zipper overpockets and 1 back zippered pocket. Reinforcement layer on bottoms for preventing tear and wear caused by high boots.

Waterproof PTFE OSMOTECH+ membrane and taped seams.

High waterproofness (10000mm) and breathability (10000 gr/m²).

SKIN UNDERWEAR

SKIN underwear is perfect for demanding physical activities. It keeps you warm on cold days out hunting, hiking or fishing. The unique channel terry material quickly wicks moisture away from the body and the longitudinal channels allow air to circulate to keep you warm. Flatlock seams for extra comfort. Double layer cuff with thumb hole.

SKINMAP BODY MAPPING UNDERWEAR

Ultimate body mapping construction first layer. It helps your body to keep dry and fresh with its innovative and quick-drying stretch fabric that transports sweat and moisture away from your skin. The optimal combination of ventilation and insulation. Extra ventilation where you sweat the most – in the armpit, chest, at the back and crotch-. Extra insulation for important areas – the shoulders and the kidneys.

HART BOOTS

OUTSOLES

NEW

**HART MUD HARTWARE
OUTSOLE PLUS (MHP)**
Strong but light MH
outsole that grips on mud
but doesn't get it back
home.

FOOTBEDS

TRAKAI

The **TRAKAI** rubber boots line uses high quality materials to ensure maximum waterproofness and comfort for the hunter.

Vulcanized with a mixture of natural rubber and **EPDM**, they offer high abrasion resistance. (**EPDM** is a polymer that stands out for its high resistance to heat and weather conditions).

It incorporates reinforcements around the foot, especially at the heel and toes, getting a flexible and durable boot.

Internal insulation in 4.5 mm **SBR** neoprene, which provides greater warm compared to other types of linings.

Dynamic comfort insole with gel base to optimize cushioning and stability on each step. Resistant sole that grabs perfectly in the mud, but without taking it attached.

TRAKAI-NL **NEW**

18'' rubber boot with 4.5mm neoprene lining. Side closure with bellows and adjustable strap.

REFERENCE

VHTNZ + Size
Sizes: 38-47 EUR

COMPOSITION

Upper: 100% Waterproof natural vulcanized EPDM 62% rubber compound.
Lining: 4.5mm neoprene + 100% Nylon.
Insole: Fibre shank.
Footbed: Hart Gel Dynamic Footbed (GDF).
Outsole: Hart MUD HARTWARE PLUS (MHP).
Weight: 1216 gr (Size 43 EUR).

TRAKAI-NZ **NEW**

18'' rubber boot with 4.5mm neoprene lining. Side zippered closure.

Sizes: 40-46 EUR

BOOTS' BAG

Zipper-adjustable bag for high and low boots.

REFERENCE

VHBB

COMPOSITION

100% Polyester/PVC.

TREKSTA

Unrivalled support, unbelievable comfort. The first shoes truly created to fit the human foot.

The NestFIT last was born out of measurements taken from some 20,000 individual feet. The upper, insole, midsole, and outsole mold perfectly to the unique contours of your foot, providing a custom fit unlike any other and eliminating gaps for unmatched comfort.

TREKSTA combines GORE-TEX® membrane with seam sealing process with GORE-SEAM® TAPE. The result is a boot with a guaranteed and durable waterproof protection and maximum breathability.

GORE-TEX® membrane is laminated to the boot's lining fabric to create a high-performance textile.

The expanded PTFE portion of the membrane contains over 9 billion microscopic pores per square inch. These pores are approximately 20,000 times smaller than a drop of water, but 700 times bigger than a molecule of moisture vapour. So whilst water droplets cannot penetrate the GORE-TEX® membrane, moisture vapour (a gas) can easily escape.

The Boa Lacing System provides a dramatic improvement over shoelaces for almost any kind of performance footwear. In BOA, low friction and the Elongated Lace Guides™ combine to eliminate pressure points and provides a unique glove like fit in your boots.

Treksta's I.S.T technology allows your feet to adapt to the abnormal and uneven surfaces through independently moving outsole structure.

The principle is simple. Each lugs move independently, and they move vertically up and down. If one lug steps on a foreign object, it automatically moves up to adapt to the surface.

TrekSta footwear with IceLock in outsoles offers the best traction available on ice and snow.

Micro-glass filaments are electrostatically aligned in the rubber compound of the sole creating slip-stopping surface tension. The vertically-aligned filaments will be exposed for the life of the sole, ensuring a solid grip as they wear.

Hypergrip produces the most advanced outsoles in the World implementing exclusive technologies. Key features:

- Superior traction on dry and wet surfaces.
- Exceedingly high wear resistance.
- Stability and lightness.
- It does not degrade or discolor.

LYNX / LYNX MID

LYNX: Super-technical and Light high boot with BOA lacing system.
LYNX MID: Ultralight mid-height boot with BOA system.

Outsole: Hypergrip with ICELOCK anti-slip system.

Weight: 640 g. (Size 43 EUR).

LORPEN

FIBRES

NATURAL FIBRES / HYDROPHILIC:

Merino sheep's wool, because of its greater length (65- 100 mm) and thinner diameter of its fibres (less than 24 micron), results in a softer yarn with finer curls pleasant to the touch. The fibre's core is hydrophilic (retains moisture) and breathes. Since this fibre heats up, even when humid, this is the middle fibre in the T3 Lorpen for colder temperatures.

SYNTHETIC FIBRES / HYDROPHOBIC:

Coolmax® is a polyester yarn from Invista® with channels to efficiently transport moisture away from the skin to the outside of the sock.

A polyester developed by Primaloft® (the worlds best artificial thermal insulator in technical garments). It creates a soft fibre, thermal insulation, hydrophobic that expels and doesn't absorb moisture.

HYBRID FIBERS:

Natural Fibres:

The new "MerinoDry" fibre mixes and complements the main benefits of superfine merino wool with synthetic polyester that improves moisture management and dries faster, providing greater resistance.

This is an intimate mix of merino and acrylic that results in a very pleasant to touch yarn that improves comfort.

TECHNOLOGY

NEW LIMITS IN SOCK TECHNOLOGY: 3 LAYERS AGAINST BLENDS

Lorpen is the only sock brand in the world that manufactures socks with **3 layers** of yarn differentiated (**T3 Technology**). It includes:

- **A hydrophobic yarn in contact with the skin** that wicks the moisture outside keeping the skin dry.
- **A hydrophilic yarn in the mid-outer side** that absorbs the moisture out of the skin and spreads it for a faster drying.
- **A resistant yarn in the outside** (usually Nylon) that protects the areas most exposed to friction depending on type and level of activity.

4	LEG (cm)	77	78	79	82	84					

XTRA SIZE. Large waist / Short leg

WOMEN - BODY MEASUREMENTS

HART UPPERS REGULAR SIZE		S	M	L	XL	
1	CHEST (cm)	88	92	96	102	
2	ARM (cm)	59	60	61	62	
HART TROUSERS REGULAR SIZE		36	38	40	42	44
3	WAIST (cm)	70	74	80	82	86
4	HIP (cm)	96	100	104	108	112
5	LEG (cm)	77	78	79	80	81

CHEST. Wrap a measuring tape around the highest position of body under your arms.

ARM. From shoulder with your arm slightly bent, follow the tape around to your wrist bone.

WAIST. Wrap a measuring tape around your natural waistline, or in the position you usually wear your trousers.

HIP. Wrap a measuring tape around your hip.

LEG. Should be measured from crotch to the floor. For this it is best to take an existing pair of pants you like and measure along the garment inseam from the crotch seam to the hem.
